EDUCATION

UNISA - ONGOING

BSc CompSci & Mathematics

Expected grad. 2027 | JHB

WETHINKCODE

2018 | JHB

CERTIFICATION

MCSA: Database Development

DP-203: Azure Data Engineer Associate

Certified SAFe @Agilist

PROJECTS

AI-DRIVEN NOTIFICATIONS

Thames Water and Sand Technologies
A DS/DE feature that identifies bursts within a digital twin of a water network.

DIGITAL WATER BALANCE

A set of DE features to account for all water movement through a defined volume in various areas including S/N London, S/N Oxford, Guildford & SWA.

ACHIEVEMENTS

Water Industry Awards UK - Nomination
Smart Water Networks award

- AI-Driven Notifications

Architected Data Warehouse Solution

- Successfully implemented Azure-based warehousing solution, for daily PostgreSQL data backup.

Architected Bronze/Silver data ingestion

- Successfully implemented Azure-based data ingestion of various complex data sources, including telemetry data, & Geospatial data. Data used to estimate daily water leakage.

SKILLS

- Enterprise Data Architecture Design
- Dimensional Modeling
- Data Warehouse Schema Development
- Performance Optimization and Query Tuning

PERSONAL SUMMARY

Senior Data Engineer with 6+ years of experience delivering modern data platforms in fast-paced, client-facing environments. Proven expertise in building scalable ETL/ELT pipelines, orchestrating distributed workloads (Spark/Databricks), and deploying cloud-native data infrastructure across Azure and AWS. Comfortable working across engineering and business teams to drive reliable, secure, and observable data systems at scale.

EXPERIENCE

LEXISNEXIS | DATA ENGINEER (PLATFORM & ARCHITECTURE)

Sep. 2025 - Present | JHB (Remote)

- Platform/data architecture work, designing reliable ingestion and serving patterns for production analytics systems.
- Provisioned and operated Elasticsearch indexing workflows and MSK (Kafka) infrastructure, improving scalability and operational consistency across environments.

Tech Stack: AWS (MSK, Step Functions, Lambda, S3, RDS), Elasticsearch, Terraform, Docker, PostgreSQL/SQL Server, Python, SQL

SAND TECHNOLOGIES (PREV. EXPLORE AI) | DATA ENGINEER

Oct. 2021 - Present | JHB (Remote)

- Built scalable ingestion and transformation pipelines across Azure Data Factory and Databricks (Spark) for telemetry and geospatial data.
- Designed data models supporting a unified digital water balance framework across multiple source systems.
- Delivered production data products end-to-end with CI/CD via Azure DevOps.

Tech Stack: Azure Data Factory, Databricks, Spark, MSSQL, PostgreSQL, Python

YEBOFRESH | SOFTWARE ENGINEER

Mar. 2021 - Oct. 2021 | Airport Industria, CPT (Remote)

- Improved core data models & features of mobile e-commerce apps.

NTT (PREV. DIMENSION DATA) | DATA ENGINEER

Feb. 2019 - Mar. 2021 | Bryanston, JHB

- Built and maintained batch + streaming pipelines for live telemetry and editorial datasets used across TV, mobile, and web.
- Developed core data models (asset hierarchies, metadata) enabling analytics and visualization.
- Provided live race-day support for global events (e.g., Tour de France, Zwift/UCI esports).

Tech Stack: MSSQL, Python, Apache NiFi, Apache Beam, Docker, Bash

KEY SKILLS & COMPETENCIES

Data Modeling:

Databases:

Data Warehousing:

Programming:

DevOps:

Data Streaming:

Microsoft SQL Server, dbdiagram.io, Luna Modeler

MySQL, Microsoft SQL Server, PostgreSQL

Databricks, Azure Datalake

Python (Pandas, NumPy), SQL, Shell

Azure Pipelines, Docker, Terraform, Git

Spark, Kafka, NiFi
